

ABSTRACT OF THE DISCLOSURE

Print systems for remotely printing intranet documents are provided. Typically, such an intranet is configured to store information corresponding to documents available for printing. Preferably, the print system includes a document retrieval system that is

5   communicatively coupled with the intranet. The document retrieval system is configured to receive document reference information corresponding to a document to be printed and printer information corresponding to a network printer. In response to receiving the document reference information and printer information, the document retrieval system provides print information corresponding to the document to be printed to the network

10   printer. So provided, the network printer, which is remote from the intranet, is enabled to print the document. Methods and computer-readable media also are provided.
